Fit the wheels the professionals use

Compomotive is an iconic brand name in the world of motorsport and is first choice for many professional drivers in over 60 countries worldwide. The reliability and technical excellence of Compomotive Motorsport Wheels has contributed to drivers and teams winning more than 300 championships in recent years.

It is important to remember that all Compomotive Motorsport Wheels are designed and manufactured entirely to one uncompromising standard in our advanced production facility in Wolverhampton England. This means that the wheels you buy are exactly the same wheels that the professionals rely on to put down the power and to win worldwide.

## New for 2010

ML13 B - New ML 13" with Gravel specification block rim form and increased range.

CXR1571 - New CXR 15" now available in 5 stud fitments and improved brake caliper clearance.

## Heritage

Bill Dixon founded Compomotive in 1973, the same year that the FIA inaugurated the World Rally Championship (WRC) for manufacturers.

It was not until 1979 that there was a rally driver's championship! The first winner being Bjorn Waldergard.

It was the era when Jacky Stewart was the F1 champion and Bernie Ecclestone owned the Brabham Team. The popular road car was the Ford Capri topped by the RS 3100 version, and the fabulous looking and performing Lancia Stratos was on everyone's wish list.

The Compomotive story continues today, with thirty-seven years of investment

in the best technology, backed by unmatched design and production know-how, still a family company and unrivalled at producing specialist bespoke performance wheels for competition and road requirements.

Roger Moore as James Bond in the 1981 film 'For your eyes only' with his Lotus Esprit Turbo. Compomotive CX500 3 piece wheels.

## Bespoke wheel design & production for motorsport, road and classic cars

Experience, design and production flexibility, technical excellence and a winning formula. Some of the reasons why leading motorsport teams worldwide, rely on Compomotive motorsport wheels.

Continuous investment in the Compomotive Technology System™ (CTS), at the company's world class production plant in the UK, is backed by enthusiastic experienced staff.

Compomotive has unrivalled ability to provide fast reaction to satisfy the most critical demands of motorsport teams and compliance with the changing

requirements in specification for world competition requirements. Producing wheels to conform to the most stringent world testing standards.

Such is the reputation of Compomotive that major world car manufacturers consult the company to design and produce prototype wheels for new vehicles at the development and testing stage, to set future production standards.

Compomotive collaborate with classic car clubs and organisations worldwide to produce bespoke replacement wheels for cherished vehicles. Contact us for details of this service.

## Designed and made in the UK

## Strength is more than skin deep

- The latest innovations in inner rim technology mean safety and reliability.
- Perfect casting uniformity from state of the art CNC die production machine.
- Castings tested in purpose built spectrograph and x-ray equipment.
- Pressure testing ensures each wheel is guaranteed not to be porous.
- Manufactured from the finest quality primary grade aluminium alloy, heat-tested to optimum hardness to ductility ratio – quality and excellence assured.
- Finished in purpose built paint plant with multi stage pre-treatment providing a perfect key for the durable powder paint finish.
- CNC wheel turning and drilling capability sets industry standards, enabling us to also produce specialist and prototype wheels in individual and batch quantities.
- Wheels are independently tested and certificated to ensure the optimum strength to weight ratio is achieved.
